projects

A more comprehensive list of projects is located on my website.

Personal Projects

Melody's Collision Course (Unity)

- Complex 3D Physic Based "Golf" game.
- Heavily focused on physics simulation and creating a arcade-like feel.
- Last enemy becomes the hole, adding dynamic and strategic gameplay.
- Levels and physics are based in a 3D world space, while the game features an isometric top-down view of the board.

Video Game Development Club

Untitled Rhythm Shooter (Unity)

- Inspired by My Friend Pedro, and the main character in Guns Akimbo.
- Part Platformer, part rhythm game. Each note is linked to an action.
- Heavily focused on understanding proper 2D physics utilization and importance of consistent movement and timing in the rhythm section.

UMN Class Projects Highlights

File Interpreter (C)

- Takes data from file and user input and coverts data from either text, binary, or 4bit and creates a graph or a Binary Tree.

Data Structure Projects (Java, C)

- Created/Implemented a Linked lists and Array lists as methods for sorting and storing data on celestial bodies/stars, info on earthquakes, and text file data.
- Created/Implemented a searchable Binary Tree/Hash Map for a classes data.

Bus Simulation (Java)

- A basic sim of a bus system with multiple bus rider events done using queues.
